SACRED ECOLOGY BY FIKRET BERKES PDF

Sacred Ecology examines bodies of knowledge held by indigenous and other rural peoples around the world, and asks how we can learn from this knowledge and ways of knowing. Berkes explores the importance of local and indigenous knowledge as a complement to scientific ecology, and its cultural and political significance for indigenous groups themselves. This third edition further develops the point that traditional knowledge as process, rather than as content, is what we should be examining. It has been updated with about 150 new references, and includes an extensive list of web resources through which instructors can access additional material and further illustrate many of the topics and themes in the book.

Fantastic overview of Traditional Ecological Knowledge

By Andrew Fahey

In the latest edition of his seminal work, Berkes has provided a very thorough, detailed and balanced overview of Traditional Ecological Knowledge that is highly readable.

Berkes outlines the sources of Traditional Ecological Knowledge (TEK) as being the ancestral preserve of

communities who rely (or have relied) heavily on their local ecologies for sustenance and security. He then goes into detail about different elements that comprise the body of knowledge now widely referred to as TEK.

Throughout the exploration of TEK, its origins, components and potential uses within modern frameworks of ecology and resource use; Berkes also gives detailed examples of TEK's operative functions - that is how in various contexts TEK works and what it is able to produce/provide to those who are looking to utilise its strengths.

What makes this a truly excellent resource however is that Berkes covers the topic in a very sympathetic yet balanced way - he doesn't shy away from demystifying Indigenous knowledge and debunking common misconceptions that "tribal" peoples were or are inherent conservationists; though he also does not dwell on this important clarification longer than necessary.

This is a fantastic resource to use either as an introduction or a more comprehensive detailed guide to the field of engaging with Traditional Ecological Knowledge for a variety of purposes - well deserving of being widely regarded as the seminal text on the topic.

Haven't read it all the way through yet...am currently in the process. But so far it has been incredibly thoughtful, thought-provoking, informative, and useful for my research with its exploration of traditional ecological knowledge. It has been recommended to me by a number of advisers, and I'm so glad for it. I'll return to edit once I'm through, but will say that for now, I am thoroughly enjoying it!
