THE ESSENTIAL INTRODUCTION FOR NEW GOLD PROSPECTORS, SECOND EDITION: EXPANDED AND UPDATED! BY TIMOTHY RAPP PDF

"The Essential Introduction for New GOLD Prospectors, Second Edition" (Expanded and Updated) is for anyone curious about the United States' vast gold resources, and wishes they could be taught how to find their own gold mine!

Most Americans aren't aware that:

- The first gold rush in U.S. history happened in 1799 in North Carolina,
- One of the largest gold deposits in U.S. history, 175 million+ ounces of gold, was discovered as recently as the 1960's,
- Much of the gold recovered in the United States isn't found "gold colored" in the ground,
- The US Government estimates over 18,000+ metric tons of gold is still undiscovered and more than 13,000+ metric tons of that is in the lower 48 states.
- Where gold has been found before, it is ALWAYS found again!

Additionally, most Americans aren't aware that they may live in or near an area where gold has already been found, and don't know there are easily accessed tools to research identifying, locating and collecting it. "The Essential Introduction for New GOLD Prospectors" has been written to provide that information and introduce each individual to the tools they need to find their own gold!

This eBook introduces the reader to the ideas and tools that are critical to gold prospecting success. The basic knowledge, skills, and information sources needed to successfully locate and gather gold and other valuable mineral resources are described. This book is packed with links to internet documents and videos to leverage its value through the power of the Internet.

Tim Rapp is an award winning former U.S. Geological Survey Scientist, a published technical author, and a degreed engineer with 13+ years of professional experience collecting geologic data, samples and reporting on natural resources for U.S. Federal agencies, Municipalities, and Private Industry. He has training and experience in the fields of Hydrology, Geology, Physics, Chemistry, Cartography, Numerical Modeling, and Petroleum, Chemical, Civil, Mechanical, and Industrial Engineering.

An Essential Guide for ANY Gold Prospector

By Amazon Customer

As President of Nye Gold Seekers in Pahrump, Nevada, I am extremely impressed with the comprehensive coverage of the subject of gold prospecting. While this book is a fantastic tool for new gold prospectors, I believe it is very useful for even the experts. The many links make the e-book a preferred format to expand the available knowledge base. Hard cover books provide references, but they are not as readily available as reference links in an e-book. Downloaded to a tablet or smart phone, the e-book is a ready reference while in the field searching for gold. Of special interest is the coverage of basic geology and mineralogy. This is "essential" to investigate prospective areas to search for gold and possibly stake a claim. There are many methods and techniques for finding and processing gold presented in the e-book. I recommend it highly.

What a fun book to read

By stanley wanless

What a fun book to read. I found the reading to be very intoxicating much like a good novel where you never know what's in the next chapter or how it's going to end. I especially liked the section on "Swauk Creek" in the state of Washington. I know the area well, but not the history of gold in the area. I look forward to using this book during my retirement to explore this area, have some adventure, and maybe find a little gold. I was surprised to learn about the Carlin area in Nevada where I worked on an extension to the Newmont underground mining facility. A GREAT read!

I can foresee this book becoming THE GOLD PROSPECTORS BIBLE

By Captain Jim

My name is Jim Young and I have been prospecting for a long time and I do a lot of research in a lot of different aspects of gold prospecting. I am also the President of South Mississippi Chapter-Gold Prospectors Association of America and also the Mississippi State Director. I state the above information so that you can understand that I do know what I am talking about. But, to make this very clear to all, the statements provided herein are my own personal thoughts and beliefs and I am NOT nor am I authorized to speak for the GPAA.

In case you are wondering about why I am saying all this is that, FINALLY, I am really happy to see that someone has put so much information under one cover. I have, probably, most of the information in the book already but it is scattered through many studies, research papers, government documents, and other books (the accuracy of which sometimes is questionable). That is why I can foresee this book becoming THE GOLD PROSPECTORS BIBLE. This book contains a ton of information under one cover that could take a prospector or researcher hours and even days to find independently. Mr. Rapp openly states in his intro to the book and also in his press release that most of this information is freely available to the public. I agree with that, ...it is. However, as many long time prospectors know, finding the information and then trying to interpret technical or scholastic jargon and put in layman's terms is a trial in itself. Mr. Rapp has put the information in this book in a simple-to-read and even an enjoyable reading format that even a brand new "newbie" can understand it.

The book contains a lot of information on the use of geology to prospect and what is in this book is the study of geology that is very specific to the search for gold and some other precious metals and minerals. Mr Rapp, also provides some general information about the tools and equipment used in prospecting, for instance, how dredges operate and how to set one up correctly, how to use a gold pan, sluice box, and some other methods to extract fine gold from black sand. Mr. Rapp states in his intro that it took seven years to put all this together.... and it shows. If there is such a designation I would definitely nominate this book as the "GOLD PROSPECTORS BIBLE". It is that good and I have never found any other publication with this much information in it. I highly recommend this to all persons interested in prospecting and will state emphatically

that any serious prospector should have this book in his library. I also hope that Mr. Rapp will eventually publish this book under hard cover because I would like the ability to carry it with me in the field and also be able to place it in my prospecting library. My recommendation for anyone interested in this topic is to definitely get your own copy...
